

Electronic Mail

Core UI concepts - visual review v1

A calm, information-rich mail system built around two spatial rules: mailboxes scan across the full window, while reading and writing stay centered. The interface uses pure black, precise typography, progressive disclosure, and cobalt only for selection or the primary action.

- No permanent sidebar
- No decorative cards or icon clutter
- More information only when it helps a decision
- Every action continues in the current context

01 All Mail

The full-width mailbox is designed for fast scanning rather than card browsing. Sender, subject, preview, time, and meaningful states stay aligned while most rows remain icon-free.

02 Thread Reader

The conversation moves into a centered reading column with earlier messages compressed into informative rows. Thread actions stay at the top, while Ask, Forward, and Reply sit at the natural end of the message.

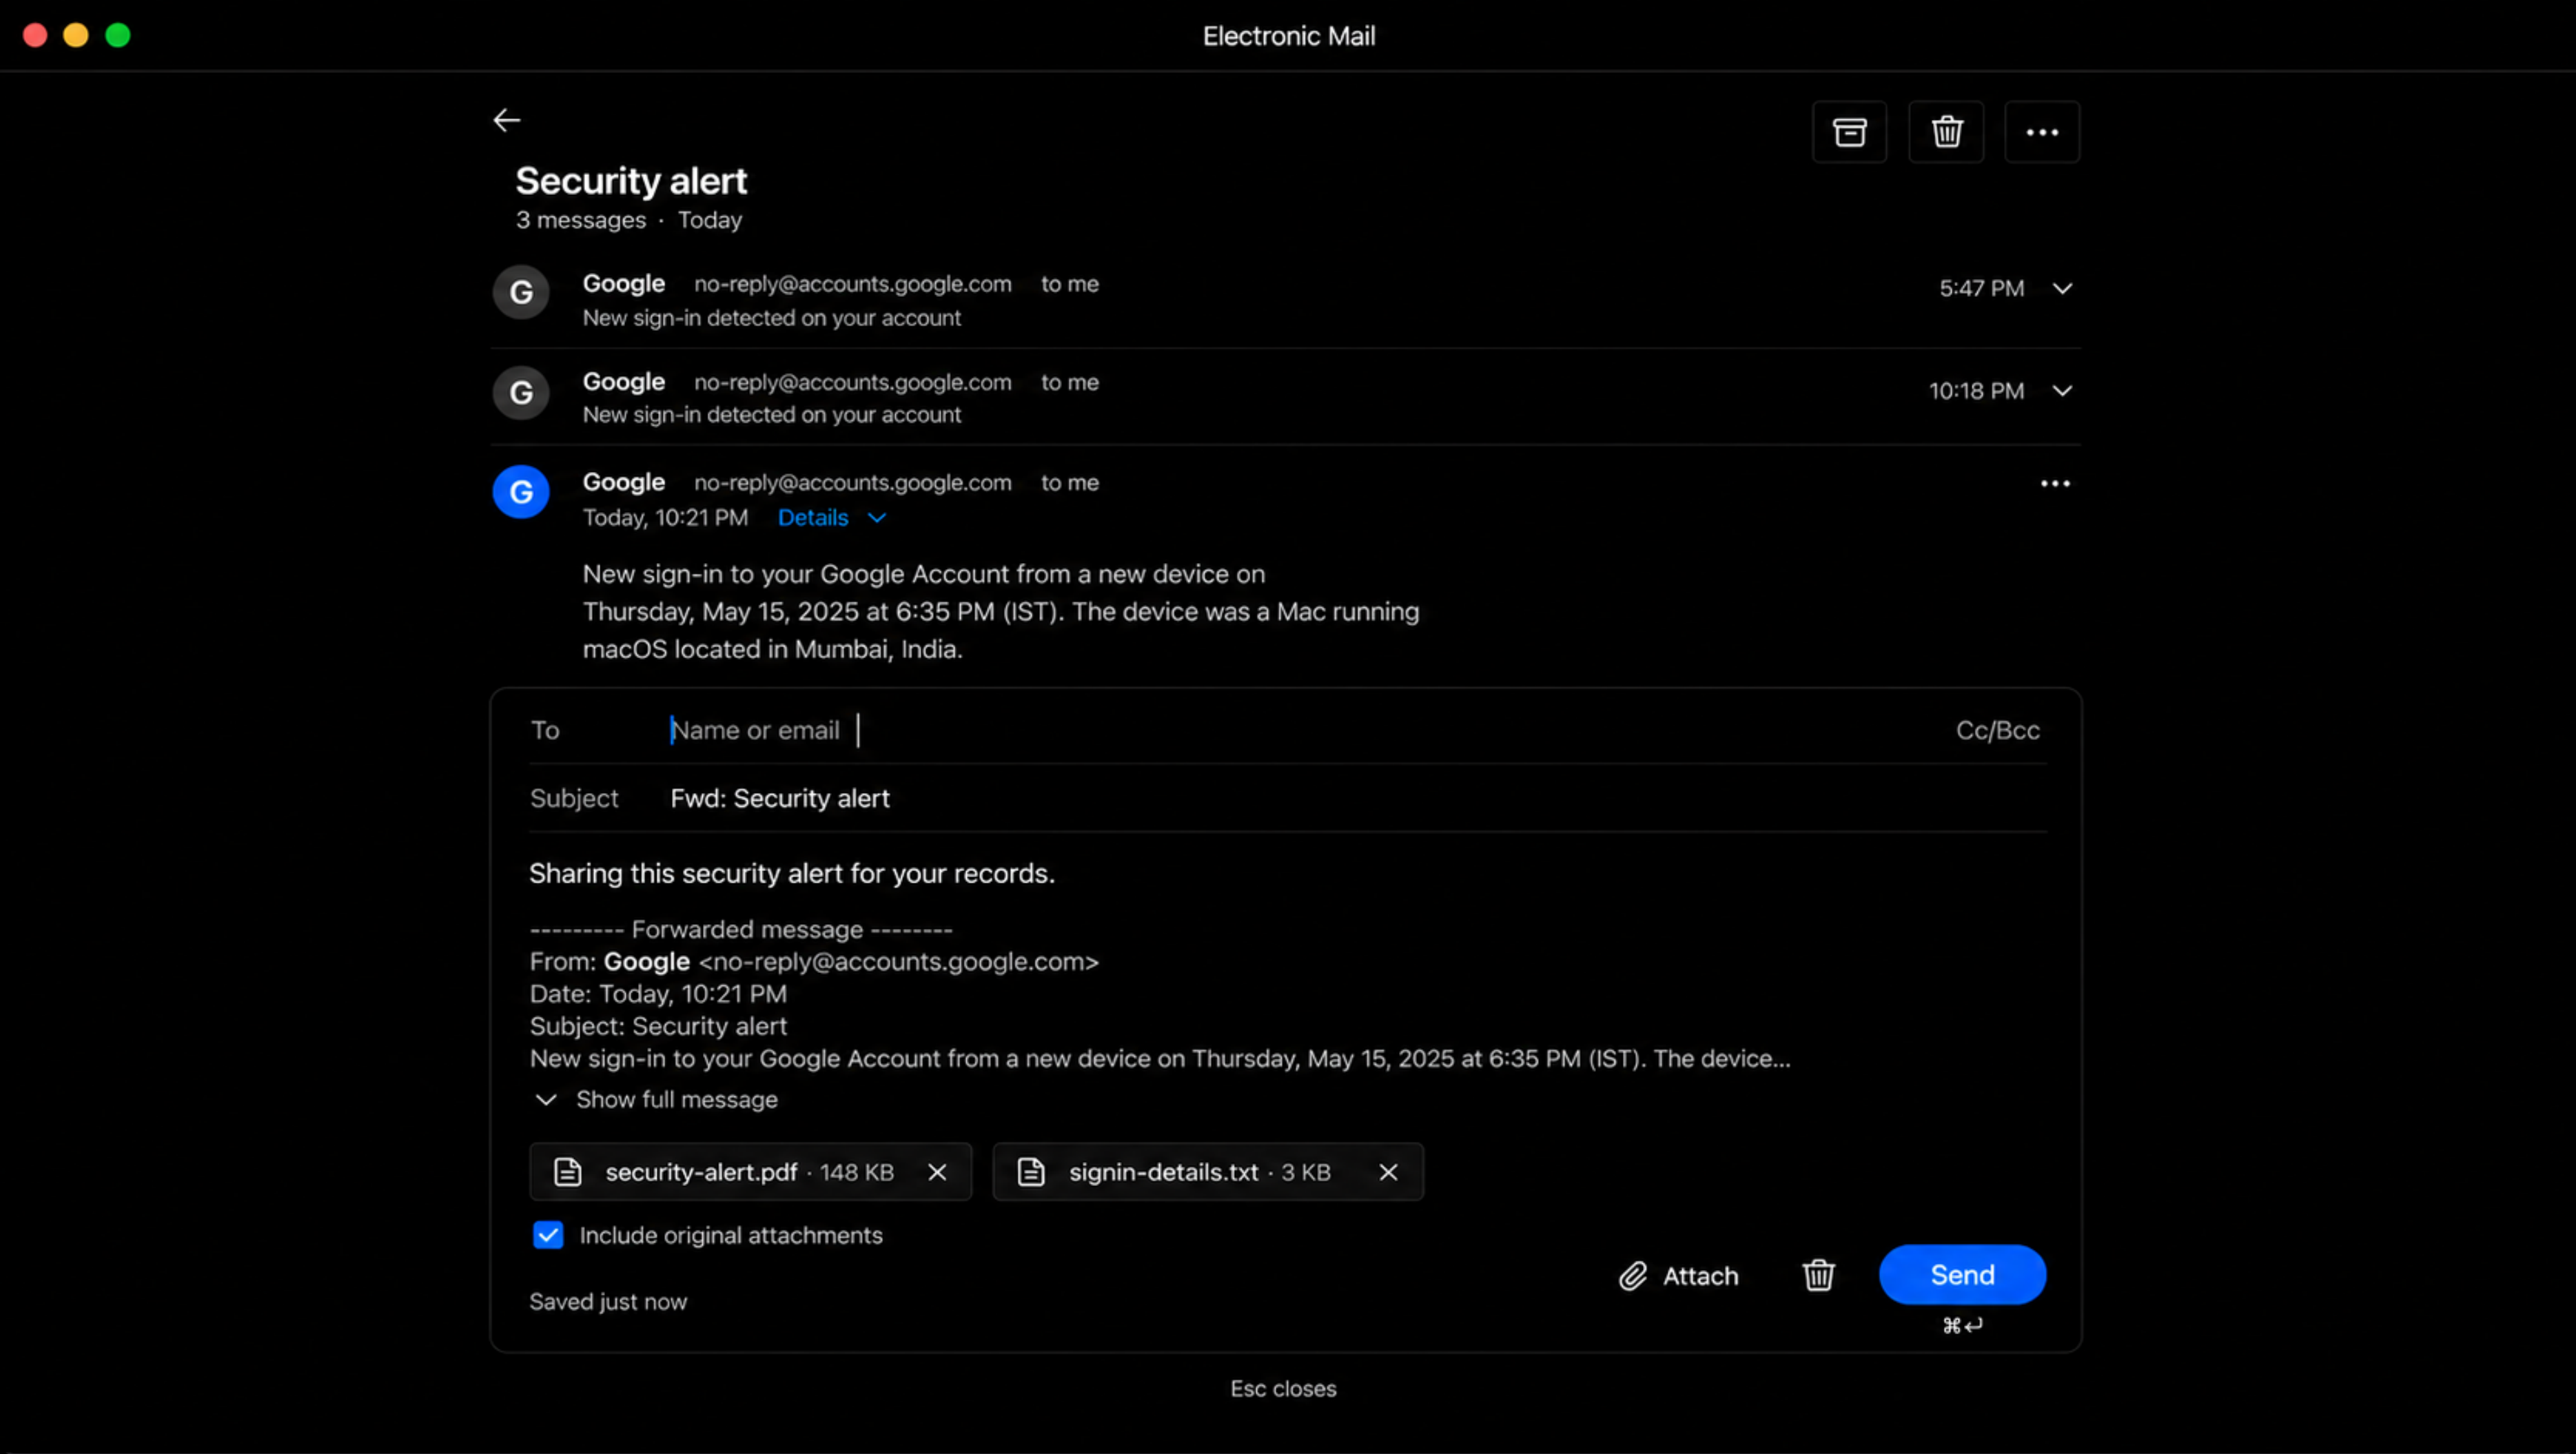

03 Reply

Reply expands directly inside the thread, so the user never loses the conversation they are answering. Recipient, attachment, autosave, discard, and Send are visible without an editor toolbar taking over the screen.

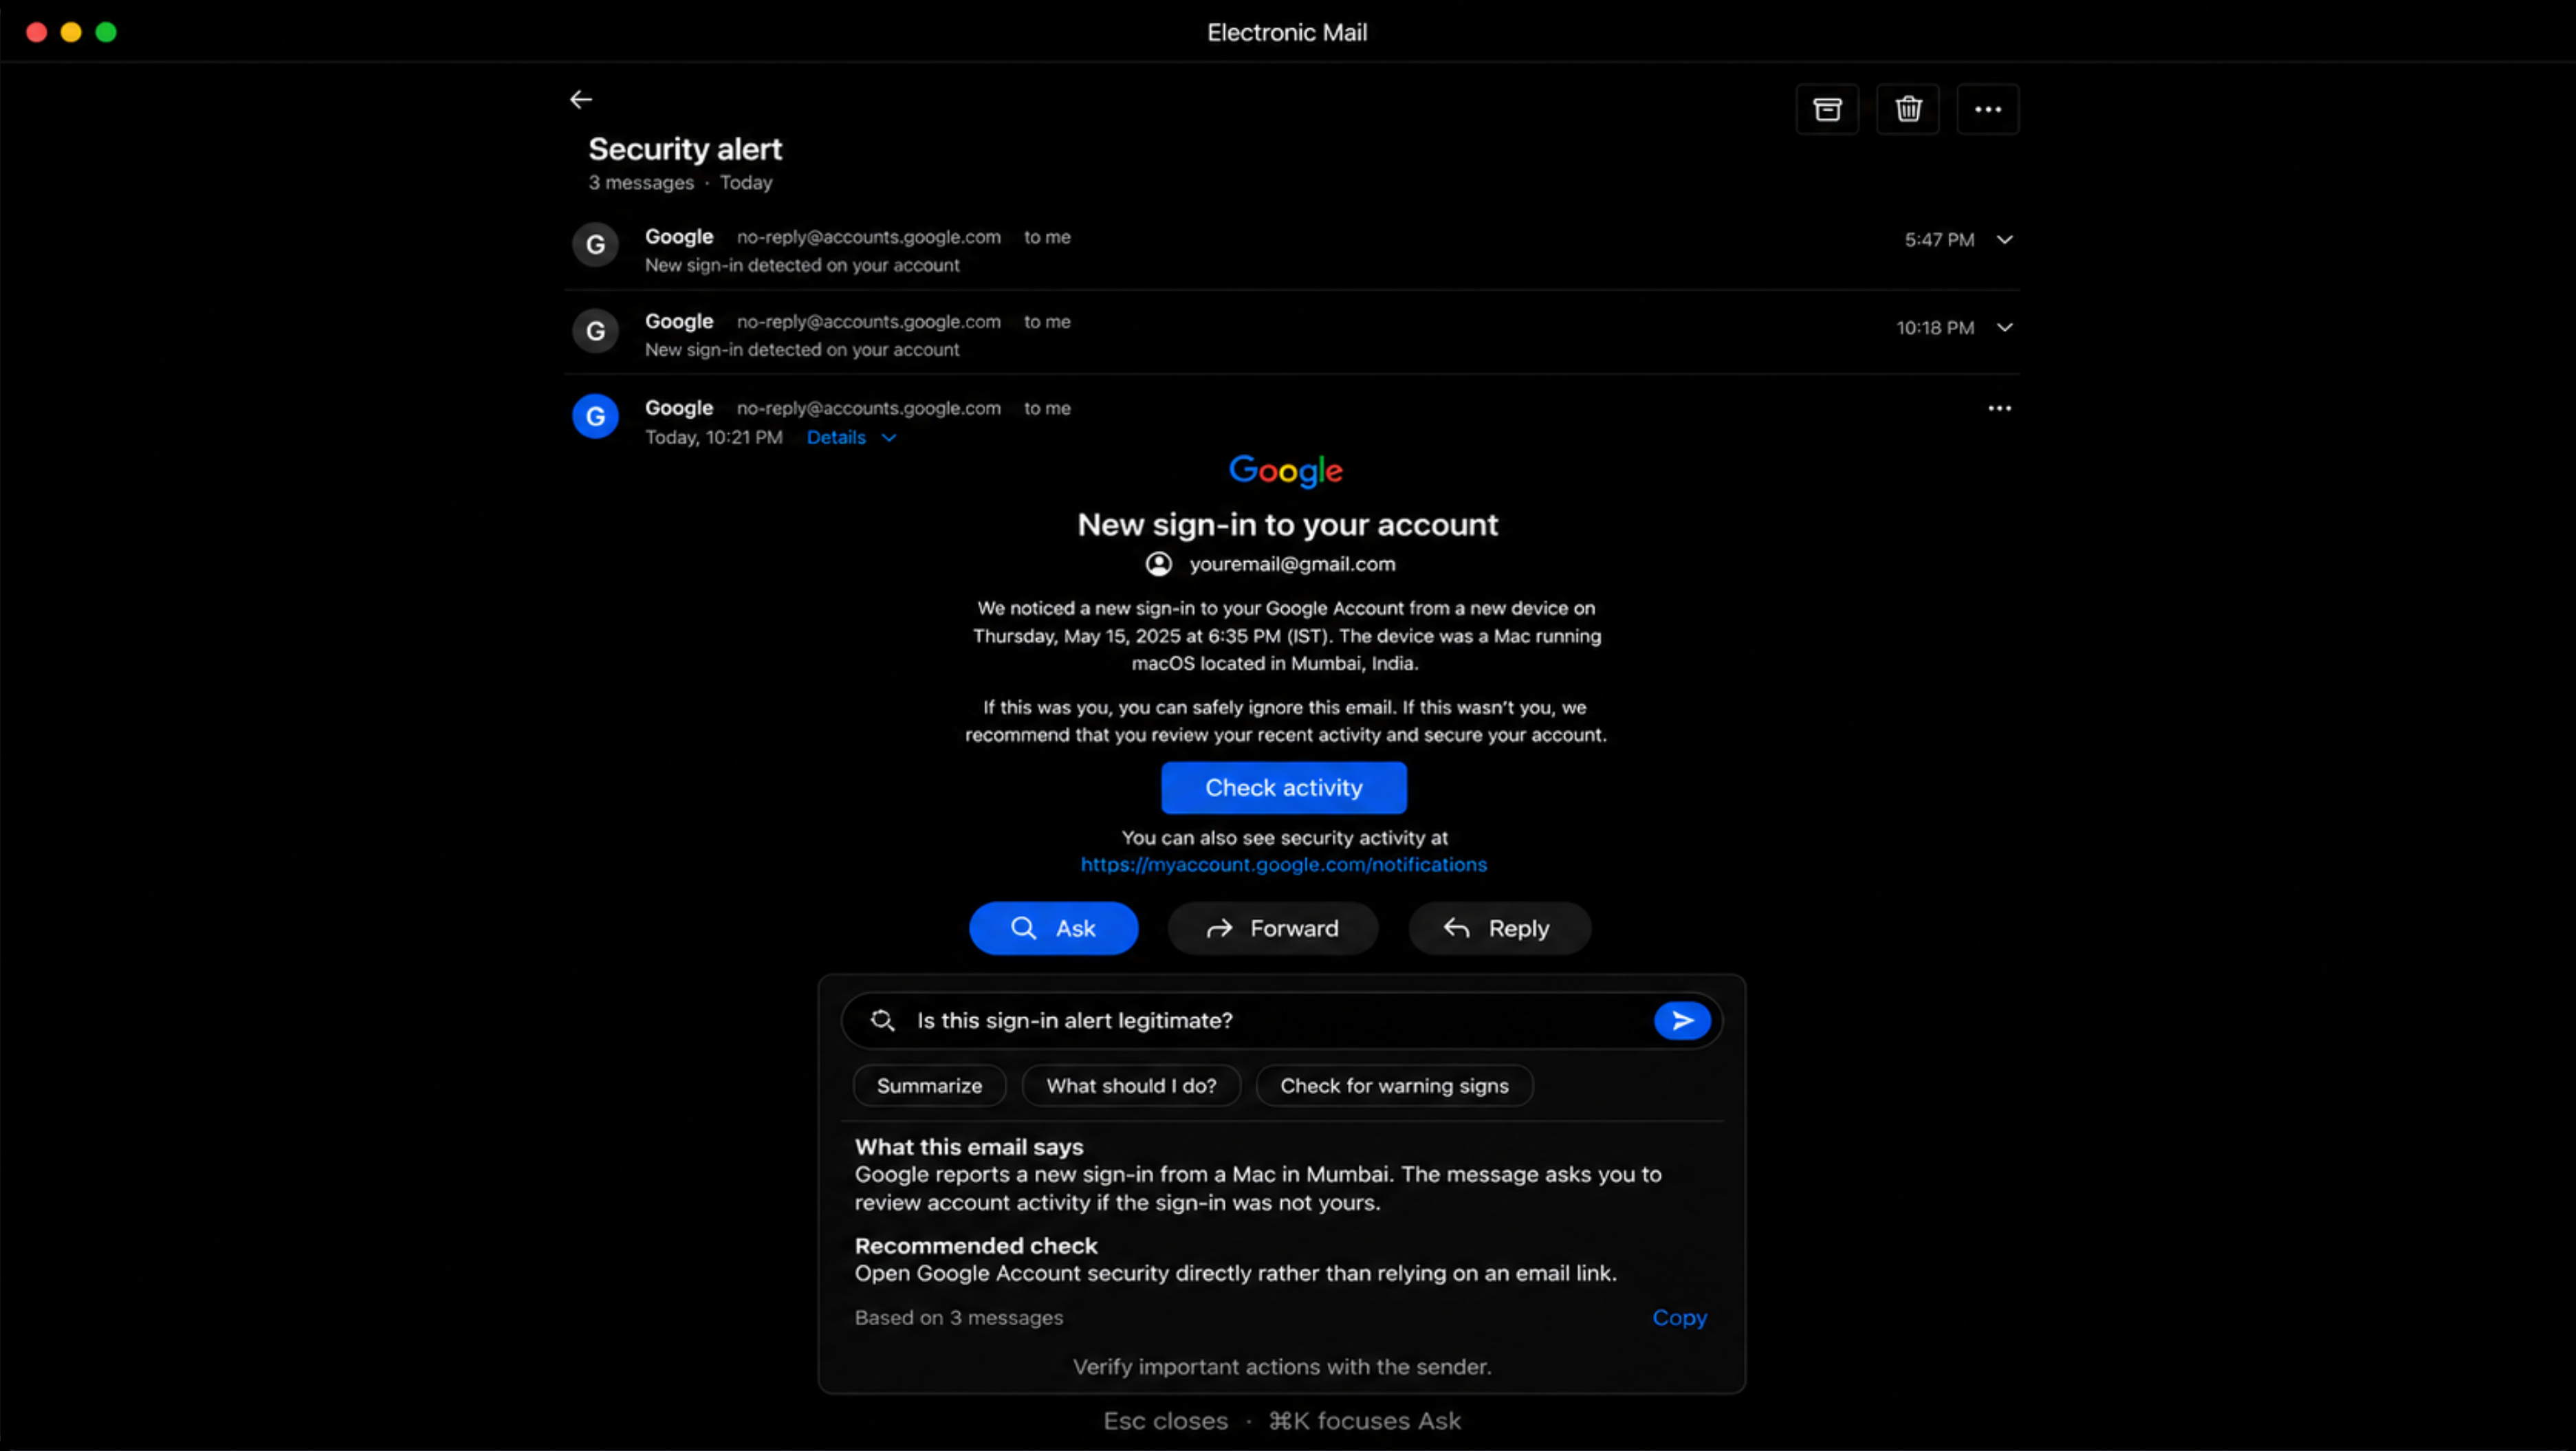

04 Forward

Forward adds the information that this action uniquely needs: a new recipient, subject, and inspectable original-message bundle. Inherited attachments remain visible and removable before sending.

05 Ask

Ask behaves as an inline reading tool instead of opening a chatbot sidebar. The question, concise answer, source scope, and safety guidance remain attached to the email being examined.

06 New Message

A new message uses the full centered workspace instead of a cramped floating compose box. Delivery fields, writing, attachments, autosave, and the primary Send action form one quiet vertical flow.

Q3 planning review

Hi team,

I've attached the revised planning deck and the final notes for tomorrow's review.

The decisions that still need owners are highlighted on pages 12 – 14.

Best,

Alex

07 Sender Details

The default reader stays calm, but Details reveals sender, recipient, date, encryption, and authentication in place. Raw technical headers remain available one level deeper rather than permanently filling the interface.

08 Search

Search reuses the mailbox as its result surface, keeping the app familiar and dense. Readable query tokens expose active filters, while selection and keyboard navigation remain consistent with All Mail.
